MOTIVATING SAFETY

Motivating employees is the process of supplying the incentives that will encourage, inspire and influence individuals to act in a desired behaviour to achieve a desired goal. Motivation is not the process of manipulating people to your advantage and against their own interest and free will.

Motivating employees is the process of supplying the incentives that will encourage, inspire and influence individuals to act in a desired behaviour to achieve a desired goal. Motivation is not the process of manipulating people to your advantage and against their own interest and free will.

Do you concentrate on safe behaviour? Have you questioned an employee who has recently completed the orientation to determine its effectiveness? How do you follow up?

Have Job Hazard Analyses been completed to identify safety hazards and to assist you in your safety training efforts?

Have machine guards that are easily removed by employees been replaced with guards that are not removable except with special tools? Are the correct materials handling equipment available?

Are tools and equipment well maintained and in good condition? Is the workplace designed to meet the needs of people rather than people meeting the needs of the workplace?

Some Theories on Motivation

There are many theories on motivating employees. One theorist believes the structure of organizations creates conflicts with the needs of the employees, who become passive and develop an attitude that everything the company does is wrong.

Accidents can occur due to poor attitudes, inattention or the disregard of company rules.

One solution involves group decision making, soliciting worker perceptions of problems and solutions, and worker input on implementing decisions.

Another approach focuses on "hygiene factors" that reduce dissatisfaction with the work environment, but then simply generate neutral feelings among workers after they reach a level that the workers feel is appropriate. According to this theory, the hygiene factors are: company rules and policies, quality of supervision, interpersonal relationships, salary, benefits, working conditions and job security. This is the basic work environment you create.

On the other hand, the motivational factors are: achievement, recognition, growth and advancement possibilities, quality of work and responsibility.

These factors are believed to motivate individuals toward a high level of fulfilment on the job.

If unsafe working conditions are present, there will be strong dissatisfaction among employees concerning safety. If quality supervision is lacking, there will also be strong dissatisfaction regarding productivity and safety rules.

Building achievement, responsibility, employee input, recognition and quality of work into your safety program and management system will motivate your work force toward safety.

Most motivational techniques offer common sense solutions. They establish a workplace built on a sense of achievement, recognition, responsibility, group decision making and job enrichment.

By building motivation into the work environment your employees will respond favourably and your safety record will likely improve.

Benefits:

Most motivational techniques offer common sense solutions. They establish a workplace built on a sense of achievement, recognition, responsibility, group decision making and job enrichment. By building motivation into the work environment your employees will respond favourably and your safety record will likely improve.
